Your topic: nursing home blueprint

Your topic's description: to build a nursing home blueprint apa format Long Term Care Blueprint assignment Nurses are having an increasing role in national health care planning. For this assignment, you have been assigned the role of a nurse consultant hired by a religious organization to help design a new geriatric facility. This organization has never attempted to provide services in this area so they need your advice on many issues. Their only goal at this point is to provide state of the art care for their aging members. Due to a very generous donation, money is not a concern. Their governing board has provided a list of questions that they would like answered which will form basis for your report. You will present your ideas in an APA formatted paper includes answers to all of the following questions. You should use your text and scholarly resources (resources of the last five years) to support your recommendations as much as possible. For example, if you suggest buffet style dining, you might cite the page in your Brunner book that speaks about special nutritional needs of the aging individual. You may not be able to make a very detailed citation for everything but try your best. Paper requirements: Minimum 5 pages (not including title and ref pages). Double spaced, minimum 3 scholarly resources, APA format, numbered pages, running head. You should look through the questions and decide how your paper will be organized. It needs intro, a conclusion, and several section with headings that organize your suggestions and answers to these questions. For example, sections might include Philosophy and Mission, Physical Setting, Personnel, etc. 1. what level of care will be provided? 2. what will be the philosophy of care? 3. what is the mission statement of this facility? 4. Give this facility a name and why you chose that name? 5. Choose a location. Why you choose it? What will it offer to your residents and employees? 6. What kind of building features should be included? 7. What kind of security systems would be necessary? 8. What facilities will be needed inside? 9. Are there any special physical problem that the residents may have? What do you know them from your anatomy and physiology book? What do you know about them from your fundamentals and med/surg book? 10. What kind of personnel will be needed to work there? 11. What kind of specialty nurse practitioners might be hired? 12. What is the patient to nurse ratio? And why? 13. What is the patient to aide ratio? And why? 14. How will residents determine the different healthcare providers visually? 15. What kind of ancillary healthcare workers should be hired? Why? 16. What kind of social services should be offered? 17. What kind of dietary services and facilities are needed? 18. What kind of activities should be available for the residents? 19. Are there any other amenities? 20. Will the nurses hired require any additional training in addition to their nursing education? 21. What kind of special features should be available for residents? 22. What kind of special features should be available for employees? 23. What kind of interview questions should be asked of aids who apply for employment? Give 2 examples and tell why they should be asked. 24. What kind of interview questions should be asked of the nurse who apply for employment? Give 3 examples and tell why they should be asked. 25. What kind of services should be available for families? Grading rubric for Nursing Home Blueprint assignment: Title page with all required APA information 5 pts. Introduction 10 pts. Body of the paper organized into coherent structure 20 pts. All questions answered appropriately 20 pts. Conclusion 10 pts. APA format appropriate, voice, 1inch margins, section headers bold, correct citation and reference format 10 pts. Scholarly quality suggestions frequently supported with scholarly citations 15pts. Spelling, grammar, sentence construction 10pts. If the description is not clear for some reason, I can email the description as an attachment. Pls call me no later than 8pm. although you can email me anytime.

Nursing Home Blueprint

Introduction

Geriatric Care Services help older patients requiring curative, rehabilitative and preventive services of nursing care for non-acute, long-standing conditions. Geriatric Care Services has a lot of medical services that are designed to provide intervention and support requires of older people (65 and above) (Matthews, 2010, 25-80). This service provides older people psychiatric evaluation; effective medication administration; nutritional administration; rehabilitation programs; etc. Through the better designing recommendations we can establish “The Geriatric Care Home” within a religious organization.

Discussion

Nursing is a respectable profession and serving humankind with heartedly is its meaning. Nursing is a very challenging task and no structure can be stand devoid of the strong pillars so nursing is the strong pillar of any healthcare provider. So, I will recommend The Geriatric Care Home to employ energetic nurses to better facilitate older patients.

Level of Care

The Geriatric Care Home should be tried it level best. Provide equal treatment and intervention should be the priority of the center. The better level of care depends upon the employees mainly on nurses, so it is important for the center to must hire energetic and dedicated employees in order to utilize their best experience.
Philosophy of Care & Mission of the Geriatric Facility

This center should be more than a hospital. The philosophy of care must be to encourage best performance in areas of behavioral administration, cognition, interpersonal abilities, leisure time development, and self-care of older people.

The mission of “The Geriatric Care Home” must be committed to improving the quality of life for older people by facilitating sympathetic and proficient care in a nurturing and home-like atmosphere.

Residents and Employees

This geriatric center should intend to provide excellent services to older people as well as their families because fragile and aged people be worthy of specialized care and treatment. Also, the geriatric center should offers its energetic employees medical benefits, education programs, training and support programs, and provide an environment in which they work with full of efficiency.

Building Features and Security System

The geriatric centers operate mainly in a mode of patient-care instead of a medical mode. Therefore, it is important feature for those concentrating on the general wellbeing of its residents instead of high-tech deliberations. The basic feature of a well designed geriatric center should be a homelike and remedial environment.
The architect must have a comprehensive understanding regarding the actual mission of geriatric center and its patient profile. It is also essential that the design concentrate on aging and its associated disabilities like physical and psychological disablements. To establish an appropriate nursing home atmosphere all the efforts should be made to provide environment as a home, instead of institutional setting.

The following recommendations about security and safety issues comprise:

- Avoid of slippery and reflective floors
- Control of access to risky and dangerous spaces
- Must develop a exit control mechanism to avoid residents leaving and becoming misplaced or wounded
- Provision of safe and sound spaces to maintain service supplies and individual material goods of residents and employees (Cress, 2011, 5-22)

**Anatomy and Physiology**

A situation in which a resident feels any special physical problem, the concern nurses and physicians must be capable to express fundamental knowledge needed to efficiently treat the problem. The concern staff should know the fundamentals of anatomy and physiology of human body. Such knowledge comprises:

- Medical and Common terminologies of anatomy and physiology
- Concepts behind human structure and functioning, comprising:
Structural organization levels of body systems

Processes of human life

Homeostasis and the connection between homeostatic imbalance and ailment

- Anatomy, Physiology of working of body systems
- Works of metabolism, food, regulation of body temperature, biological development, and aging (Rosenthal, 2011, 525-535)

Working Staff & other Ancillary Healthcare Workers

It is important to running effectively the geriatric center, must employ a multidisciplinary team which should be consists of energetic nurses and geriatric social workers. In particular, nurses are the backbone of any healthcare provision, so must be hired well-knowledge, well-trained, and well-qualified nurses.

Ancillary healthcare staffs are also important for the center. Ancillary staffs give the great support services allowing the delivery of health service. They should be hired on the basis of their enhance skills that must be based on the aid services despite of medical and nursing services (Cress, 2011, 5-22).

Patient to Nurse & Patient to Aide Ratio

Nursing is noble but a most challenging profession. Nurses are the strong foundation of any healthcare provision. Professionals say to reduce burnout, diminish burdens and enhance patient safety, there must be more nurses working in healthcare centers each patient. However,
NURSING HOME BLUEPRINT

nurse-to-patient ratio can differ service to service. In the light of law nurse-to-patient ratio must be 1:1 in the OT room, 1:2 in the I.C.U. and in labor room, 1:4 ratio in ante-partum (prior to delivery), post-partum (following delivery), etc (Kelly, 2011, 347-351).

By the perspective of patients to aid ratio, it must 1:1 ratio because every need of patient is important to provide assistance in order to patients feel comfortable within the healthcare center (Kelly, 2011, 347-351). So, if the center will follow this law, it is naturally that people can easily determine your different and great services visually than others.

Social Services and Dietary Facilities

Social care services must be the part of “The Geriatric Care Home”. The center must provide enhance support services to older patients. They should provide dietary facilities, problem solving facilities about personal and family matters, even their financial issue. Dietary facility within the “The Geriatric Care Home” is necessary. Aging people have the similar changeable factors of risk for heart disease as youngsters, so diet must consist of healthy foods.

Activities, Special Features & Programs for Residents & Employees

It is also essential to provide homelike environment within the center. The center should provide the learning and playing environment to the residents. The service of Internet now is a better feature that must provide to the residents. Geriatric services should provide education and training programs to their nurses, because the center will probably face different patients in terms of diseases, so it is necessary to establish a well education program as special features for
employees mainly nurses to provide more information and education about various kinds of frail and elder patients.

**Hiring Interviews**

The management of the center must ask about HIIV/AIDS questions in the interview, because if the workplace is not equipped this disease can affect the efficiency of other employees. Moreover, identifying reduced efficiency from colleagues of an employee with HIV/AIDS can be expensive (Cress, 2011, 5-22).

Management must ask these questions from nurse candidates:

- *Tell about yourself:* Through this question, you can assess the overall overview of the candidate.
- *What led to your interest in the profession of nursing?* Through this question, you will assess the overall interest and dedication of a candidate in the field of nursing.
- *How do you calm down when worked in stressful conditions?* From this one, you can assess the efficiency level of candidates that how they can work in stressful situations, this question will also show their dedication and willingness.

**Services for Families**

“The Geriatric Care Home” should also provide services for families; they can provide care selection procedure for families who live far from their patients. In this way, the center can employ a care manager and that manager will just perform a particular task, locates a daily
NURSING HOME BLUEPRINT

caregiver will be the single task of a care manager. The center can also provide a home-based medical treatment by experts for family convenience.

Conclusion

A geriatric care service is equipped to cope with the frail and older people. Their concentration is narrower; therefore their expertise is more productive. Geriatric services provide homelike and therapeutic environment within the center. The above mentioned recommendations are effective and successful for “The Geriatric Care Home”, and the center should follow above guidelines to establish a successful geriatric healthcare center.
